

Data Protection Impact Assessments (DPIA's)

A-Z summary

A Data Protection Impact Assessment (DPIA) is a process designed to help us analyse, identify and minimise the data protection risks of a project or initiative. DPIA's help us demonstrate that appropriate measures have been taken to ensure compliance with data protection laws.

It also ensures that our colleagues think about privacy at the early stages of the project and adopt a 'data protection by design and default' approach.
